

Task 1:

Step 1:

Clone project from github

This project includes Database also

Step2:

Import database in wamp server

Step 3:

Open the project in Visual studio

After importing set the database connection in database.js file

By adding the credentials

Step 4:

You can start the server by running the command on vsc code **node index.js**

Step 5:

Test the api on postman

Here are my end points:

<http://localhost:4000/users>

1: /Signup :: for register

2: /login :: for user login

3: /tweet :: for making tweet

4: /updatetweet :: for update tweet

5: /deletetweet :: for delete tweet
